

# INTERWOVEN ISSUES

## Weaving Together Expert Insights

Interwoven, NUV's peer reviewed interdisciplinary journal, brings together a wide range of ideas to offer a layered mosaic of scholarly work.

Peer reviewed journals are critical to functioning of academic work without which development and evaluation of knowledge raise questions about credibility and self-correction. For the academic community to grow and prosper, peer reviewed journals are essential, as articles in them are reviewed by colleagues who have the same command over the subject matter as the journal authors. Through the process of peer review and evaluation; the content, context and quality of research is questioned, fresh rigor is invested to make corrections, which in turn lifts up the academic community.

Interwoven offers a platform to present scholarly articles that are disciplinary and non-disciplinary, and engage in a rich academic discourse. Non-disciplinary articles, because of their generalised content, provide a means for all readers to find a common ground to connect and get involved regardless of their expertise. Disciplinary work, on the other hand, is presented in a form that non-disciplinary readers can read, understand and participate in an academic discourse. Interwoven requires disciplinary work to be presented in an interdisciplinary platform so a robust academic discourse about discipline can take place to reflect, reinvent and expand traditional disciplinary boundaries.

Interwoven is a double blind, twice reviewed journal. Every paper in it undergoes two rounds of reviews, each round of review by at least three colleagues - one with a disciplinary expertise, another with no disciplinary expertise, and third, with a language expertise. In the first round of review, colleagues examine suitability, acceptability and need for correction. In the second round the manuscript is reviewed to ensure that recommended changes have been incorporated and content, context and research imbibe the interdisciplinary spirit of the journal. Attention is devoted to ensure that complete confidentiality is maintained; neither is an author able to identify the reviewer, nor is a reviewer able to identify the author.

A journal with a long title like, Interwoven, Peer Reviewed Interdisciplinary Journal of Navrachana University is hard to cite. The title is long and loaded with significant key words - all of them are important. To authors, it is recommended that accepted papers be cited in the following manner (in APA format): Author(s). (Year). Article title. Interwoven, Volume (Issue Number), pages. Retrieved from URL. For example: Pillai, V. B. (2017). The heart and soul of school curriculum. Interwoven, 1 (1), 1-7. Retrieved from <https://nuv.ac.in/interwoven-an-interdisciplinary-journal-of-navrachana-university/>

### 1. Author

Manuscripts are accepted from the academic research domain comprising of faculty members, students (both UG and PG), doctoral and postdoctoral scholars. Click to read more

## **General Information**

Manuscripts are accepted from academic research domain comprising of faculty members, students (UG and PG), doctoral and postdoctoral scholars. Manuscripts addressed to multidisciplinary readers can be written in any of the following categories and may include new contemporary broad fields.

1. Architecture and Design
2. Education
3. Engineering
4. Management
5. Mathematics
6. Science
7. Social Sciences

### *Manuscript Preparation*

Manuscripts should be submitted as a Word file and should be limited to pages 4-10 for a regular article and 8-15 pages for a review article. Other detailed page layout options should be as follows:

- Line spacing - 1.5
- Font - Times New Roman
- Font size (title- 18 pts bold, author names - 12 pts, affiliation and address- 10 pts italics, titles of subtopics- 12 pts bold, main text- 12 pt)\*

Authors should write just their names the way they would like to have on the paper and should NOT write their educational degree and designation with their name.

- Margin - 1 inch from all sides
- Images/Figures - 30% Maximum
- The images/figures should be clearly visible
- The graphs should have clear legends, labels and notes
- Equations should be written in Microsoft Equation Editor
- The references should be written in American Psychological Association (APA) style.
- The references should be labelled in the list and their reference should be inserted as a superscript without any brackets.

Types of manuscripts and the formats for each category

## **Regular Articles**

### **1. Architecture and Design**

#### **(a) Educational/Studio Projects (by Faculty Member)**

1. Title
2. Author names and affiliation
3. Abstract
4. Keywords
5. Educational objectives
6. Precedents and Critique
7. Variety of projects presented pictorially and with small explanation for each project
8. Short analysis
9. Lessons learnt

### **(b) Educational/Studio Project (by Students)**

1. Title
2. Author names and affiliation
3. Abstract
4. Keywords
5. Educational objectives
6. Precedents and Critique
7. Variety of concepts and developments
8. Short analysis
9. Lessons learnt

### **(c) Exploratory Work**

1. Title
2. Author names and affiliation
3. Abstract
4. Keywords
5. Historic overview
6. Precedents and Critique of earlier work
7. Observation of existing and photographic documentation
8. Visual documentation (drawing) and small explanation (verbal)
9. Short reflections
10. Lessons learnt

## **2. Education/Engineering/Science/Social Sciences**

1. Title
2. Author names and affiliation
3. Abstract
4. Keywords
5. Introduction
6. Experimental/Materials and Methods
7. Results and Discussion/Analysis
8. Conclusion
9. Acknowledgements
10. References
11. Supporting Information

## **3. Management**

### **(a) Case Study**

1. Title
2. Author names and affiliation
3. Keywords
4. Introduction
5. Overview/Analysis
6. Status Report
7. Case Problem
8. Appendix

**(b) Teaching Notes (to be written after Case Study)**

1. Title
2. Author names and affiliation
3. Keywords
4. Synopsis
5. Educational objectives
6. Discussion outline/Question set
7. Tips for resolving the case problem

**(c) Article**

1. Title
2. Abstract
3. Keywords
4. Introduction
5. Literature review (background, conceptual development/framework)
6. Methods/Methodology (Sampling, Data Collection, Measures)
7. Results/Findings
8. Discussion

**Review Articles**

1. Title
2. Author names and affiliation
3. Abstract
4. Keywords
5. Introduction
6. Major advancement in the subject
7. Significant gaps in the research
8. Current debates
9. Future Directions
10. Acknowledgements
11. References
